

MALDIVES MARINE RESEARCH BULLETIN

A publication of the Marine Research Centre
Malé, Republic of Maldives

No: 6 Report on fishing survey including opinion
on possibility of canning factory in the Maldives (1962) 10 December 2002

MALDIVES MARINE RESEARCH BULLETIN

The Maldives Marine Research Bulletin is published by the Marine Research Centre of the Ministry of Fisheries, Agriculture and Marine Resources. The Bulletin aims to improve understanding of the Maldivian marine environment and to promote sustainable utilization of marine resources by providing a means of disseminating relevant information. Each issue is dedicated to a single theme, on any marine topic, but with particular emphasis on fisheries and marine life. Bulletins will include original research results, reviews and manuals. The Maldives Marine Research Bulletin will be published in English with a Dhivehi summary. Information published in any Bulletin may be freely used, but the source should be acknowledged. All enquiries should be addressed to:

EDITORIAL

This volume of the Maldives Marine Research Bulletin reprints a report by Mr. Yoshitsugu Shiji who visited Maldives in 1962 on the request of the Government of Maldives. He was accompanied by a Mr. Sato, and together they conducted a survey on the possibility of establishing a tuna canning factory in the Maldives. They obtained information during the course of two survey trips, during which they visited much of the Maldives. Further data on Maldivian tuna catches was obtained from the Ministry of Home Affairs; these data now give a fascinating snapshot of past catches in the Maldives. The data presented in the report by Mr. Yoshitsugu Shiji is the only available catch and effort data for that period and therefore it is particularly valuable.

The surveys carried out by Shiji and Sato suggested to them that the Bonito (skipjack) stock was not a migrating population but one, which lived around the Maldives and had a vigorous appetite for bait. It was recommended that 20 to 50 tons mechanised fishing boats be used for this fishery. Export of frozen tuna to the United States and Europe, and increased production of dried and salted fish using screens to protect the fish from harmful insects were other recommendations for increasing income and resource utilization. Another important recommendation was to conduct a pilot study on a small scale to obtain the necessary data regarding the cost of establishing and managing a canning factory.

Careful attention has been given in publishing this report to maintain the format of the original document. Names of atolls and islands have been published as written in the original, not as they are spelt now. A table of these atoll and island names, together with their modern equivalents, is shown at the end of this Bulletin. As there were some very obvious mistakes in the tables, they have been formatted with an additional column showing the corrected totals. However, the figures have been made using the original data. The traces of the two surveys have been done with careful precision in order to obtain an exact replica of the original.

All of this could not have been done without the help of all the staff at MRC to whom we would like to express our heartfelt gratitude. We would like to take this opportunity to thank Ms. Fathmath Zeena Ali for word processing, Ms. Aishath Shahindha for word processing and doing all the graphics and Mr. Ibrahim Faizan for creating an almost exact replica of the two survey traces. In addition we would also like to thank Aminath Sheron, Ashiya

Abbas, Hussein Mohamed, Ibrahim Asghar, Misbah Ahmed, Miusam Mohamed, Mohamed Ilham, and Mohamed Sudhaau, and for their invaluable help given throughout the different stages of making this bulletin.

Special gratitude also goes to the Minister of Fisheries, Agriculture and Marine Resources Honorable Abdul Rasheed Hussein for his continued support and encouragement towards the publishing of the Maldives Marine Research Bulletin.

On a more somber note, the Maldives Marine Research Bulletin would not have come into existence if it were not for the hard work and dedication of the late Maizan Hassan Maniku. He was the former Director General of the Marine Research Centre, and the founder of the Maldives Marine Research Bulletin. His passing away in July this year is an irreplaceable loss to the fisheries industry and to the Maldives as a whole. This volume of the Maldives Marine Research Bulletin is dedicated to his memory. May Almighty God rest his soul in peace. Amen.

PREFACE

The writer, was dispatched to the Maldives through recommendation of the Ministry of Agriculture and Forestry and the Ministry of Foreign Affairs of Japan in compliance with the request of Hon. Minister of Home Affairs of the Maldives, Mr. Ibrahim Rasheed who visited in Japan October 1961, for the purpose of requiring the survey on the possibility of a canning factory in the Maldives.

The writer conducted the survey as follows:-

From	7 th Jan 1962	Left Haneda Airport.
	8 th Jan 1962	Arrived at Colombo Airport.
From	9 th Jan 1962	Stayed at Colombo waiting the
To	17 th Jan 1962	transportation available
	18 th Jan 1962	Left Colombo for the Maldives by a
	19 th Jan 1962	Maldivian steamer.
From	20 th Jan 1962	Landed on the Capital Island, Malé.
To	5 th Feb 1962	Stayed in Malé and engaged in the
	6 th Feb 1962	investigation through the Maldivian
From	15 th Feb 1962	Government.
To	16 th Feb 1962	Sailed out Malé for the first survey trip
From	25 th Feb 1962	(See Chapter II).
To	26 th Feb 1962	Stayed in Malé and prepared the second
From	11 th Mar 1962	survey trip.
To	12 th Mar 1962	Sailed out Malé for the second survey trip
From	18 th Mar 1962	(See Chapter II).
To	19 th Mar 1962	Stayed in Malé and waited the
	21 st Mar 1962	transportation for returning.
From	22 nd Mar 1962	Left Malé for Colombo by the Maldivian
To	26 th Mar 1962	steamer.
	27 th Mar 1962	Arrived at Colombo.
	29 th Mar 1962	Stayed at Colombo and prepared
		returning to Japan.
		Left Colombo Airport.
		Arrived at Haneda Airport.

Our surveys or investigations were carried on through English as a medium language.

In this report:-

As the first step, we have tried the analysis or Maldivian catch figures in Chapter I in order to know the actual status of the fishing industry in the Maldives, and stated the results of our survey trips which were observed really through our eyes and ears in Chapter II.

In next, as basing upon results of Chapter I & II, we have discussed cost of fish produced in the Maldives in Chapter III and studied on the possibility of a canning factory in the Maldives in Chapter IV.

At last we have concluded the results of the survey including some recommendations or suggestions in Chapter IV.

However, these results were induced from the survey of which period was only three month, accordingly our conclusion stated in this report might be neither perfect nor satisfactory. We hope that it must be supplemented and improved through further surveys and studies.

We wish to express our heart-felt appreciations not only to the Maldivian Government but also to Maldivian people for their wonderful coorperations and hospitalities rendered to our survey.

I would like to thank also, on this opportunity, to Mr. B. Sato for his energetic performance of his duty, whom I took him with me to the Maldives as my assistant.

Chapter I

ANALYSIS OF CATCH FIGURES

In order to grasp the real and accurate status of the fishing industry in any country, the analysis of the catch statistics in the past are the fundamental step and one of the most important factors. We cannot discuss the fishing conditions to induce any valuable conclusion for the developments and improvements of the fishing industry in the country, without this intelligences from those studies. In this point of view, we have spent considerable time and energy to prepare various tables and diagrams, and examined the results inducing the conclusions for the developments and improvements of the Maldivian fishing industry.

1. Catches (pieces of fish) by Atolls.

First of all, we provide Tables 1-A & 1-B to show the productions in all Islands of the Maldives for 1961 and 1960 respectively, and basing upon Table 1-A and Table 1-B, we have calculated and tabulated ourselves Table 2-A and Table 2-B relatively of which contents show the productions by all atolls for 1961 and 1960 respectively. Also Table 2-C prepared to show the catch figures by all atolls for the year of 1959, of which tabulating of catch figures had been conducted by the Fisheries Board of the Maldivian Government, but the numbers of boats and the numbers of days sailed out in each Atoll estimated ourselves taking the average of relative figures in Tables 2-A & 2-B.

Basing upon total figures of Tables 2-A, 2-B & 2-C, the average monthly catches (fish by pieces) are shown in Fig. 1. With this Fig. 1, we come to understand following facts:-

1. The annual productions in the Maldives are increased, year after year for latest three years.
2. Mode of monthly catch figures in the Maldives is W-type, namely, the production of the Maldivian fishing industry in every year is gotten larger, in the beginning, middle and end of each year.
3. The peaks of fishing seasons are the months of December, January and July almost every year.

In order to know the monthly proportions of catches against annual productions, Table 3 & Fig. 2. have been prepared. With these, we can

understand that the Maldivian fishing industry produces 50% in 4 months of January, February, July and December and other 50% is produced in other 8 months.

To know the production by different atolls, Fig. 3. has been prepared basing upon Tables 2-A, 2-B & 2-C. With this, we come to know that the graphic mode is almost L-type. Namely the northern atolls produce much more than central atolls and southern atolls except for Thaa Atoll. The catch proportions of each atoll are shown in Table 4 & Fig. 4. With Fig. 4, we come to know that 7 northern atolls produce more than 65% of the total and other 10 atolls produce only less than 35% and the productions in atolls fluctuate nearly in accordance with their populations except for HA., N., and Malé Island.

2. Catches (weight of fish) by Atolls

The catch statistics of the Maldivian Government are recorded by way of pieces of fish. Accordingly, it is necessary to convert pieces into weight so as to compare the catch data of the Maldives with those of other foreign countries. To solve this problem, we provide Table 5, in which the actual catches of 1961 in 9 major fishing islands are tabulated by different sizes of fish, and the relative monthly percentages of big size fish (GODHA & TUNA) usual size fish (KANDU-MAS) and small size fish (RAAGONDI) are calculated and also tabulated.

Utilising these percentages, the actual catch figures by pieces in Tables 2-A, 2-B & 2-C are converted into Tables 6-A, 6-B & 6-C respectively. For this calculation, on the other hand, following coefficients of weight are also used.

(1) Big size (GODA)	7kgs. per piece
(2) Usual size (KANDU-MAS)	1.963kgs. per piece
(3) Small size (RAAGONDI)	1kgs. per piece

Remark: The coefficient of weight for the usual size 1.963kgs. is attributed to Table 7. Other two coefficients are estimated roughly.

Thus Fig. 5. is provided, basing upon Tables 6-A, 6-B & 6-C, in order to show the monthly fluctuations of productions. The graphic mode of Fig. 5. proves also W-type which is quite similar with that of Fig. 1. This fact teaches us that the usual size of Bonito (KANDU-MAS) is always abundant

considerably in each composition of catch; accordingly most rich Bonito resources around the Maldivian Waters are seemed to be those of usual size, of which ages are 3 or 4 years old. Consequently, we can say that there is no evidence of over fishing in the Maldivian Waters at present.

Though percentages computed in Table 5 are not accurate enough to apply them for the purpose of converting the pieces of fish produced in different atolls and years into the catches in weight, without taking geographical and annual changes for the compositions which are thinkable to fluctuate in the particular atolls and years into consideration, but there is no other way with us to solve the problem.

3. Catch per boat, catch per day and catch per day and boat.

To study the catch data in detail, the catch per boat, the catch per day and the catch per day and per boat are calculated and tabulated in Table 8-A, 8-B, 8-C; 9-A, 9-B, 9-C and 10-A, 10-B, 10-C respectively. And Fig. 7. is prepared basing upon Tables 10-A, 10-B, 10-C. With these tables and this Fig., we come to know the following facts.

1. The average catch per day and per boat throughout the year are 0-95 pieces in 1961, 0.74 pieces in 1960 and 0.93 pieces in 1959.
2. Generally speaking, the most effective and economic catches are conducted in the months of January, February, June or July, and December, which are almost coincided with peaks of fishing seasons in the Maldives.

4. Comparison of catches in 6 districts.

To make clear whether there is the seasonal migration of Bonito around the Maldivian Waters, the Maldives are divided, for the conveniences of study, into 6 groups or districts from North to South as follows:-

Name	Location	Name of administrative Atolls.
I District	Northeast	HA. HD.
II District	North-East	SHA. N. LAV.
III District	North-West	R. B.
IV District	South-East	K. V. Malé, M.
V District	South-West	A. F. D.
VI District	Southeast	THA. L. G.

In accordance with this geographical classification, Fig. 8-A, 8-B, 8-C are prepared. As shown in these diagrams, however, the seasonal migration from a district to another is not clearly indicative; in other words, there is no district seasonal fluctuation by districts. From these facts, the Bonito stock caught in the Maldives is not migrating population, but the native population dwelled in the Maldivian Waters. The evidences were proved several times by our investigations of stomach contents, of which fish were caught in several different atolls during our last survey trip.

To study more precisely the real status of fishing in 6 districts, we have prepared Tables 11, 12, 13 in which the average monthly catches in 6 districts per boat, per day and per day & per boat are tabulated respectively. Their relative Figs. 9, 10, 11 are also prepared. With these tables and diagrams, we come to know the particular phenomena as follows:-

"The modes of diagrams both in 1961 and 1959 are W-types, in these Figs., but there is no distinct peak in July of 1960 indicated. However, the actual catch produced in 1960 is 8,438,725 in pieces or 17,5638.5 tons in estimated weight which is slightly more than that of 1959. Accordingly, we can say that the fishing conducted in 1960 is neither effective nor economic comparing with other two years. In other words, the catch does not follow in accordance with the fishing efforts invested in 1960, but the catches in both 1961 and 1959 are produced in proportion to the fishing efforts invested."

Furthermore, Tables 14, 15 & 16 are prepared in order to know the average status for three years of 1959, 1960 & 1961 with respect to the catch of each district per boat, per day and per day & per boat respectively and their relative Figs. 12, 13 & 14 are also provided. The results are summarised as follows:-

- (1) The three years' average catches per boat are monthly 638 pieces both in II & III Districts of which ranking are top, 584 pieces in VI District in the second place, 475 pieces and 464 pieces in IV District and I District respectively, and 356 pieces in V District which is lowest.
- (2) The three years' average catches per day are 70 pieces level in II & III Districts, 60 pieces level in I & VI and 50 pieces level in IV, V, of which ranking is almost same as that of the three years average catches per boat mentioned above.

- (3) However, results regarding the average catches per day & boat are quite different from those of (1) & (2). IV District maintains the top in every and its average for the three years is 1.41 pieces. All other Districts produce only less than one piece per day & boat. This fact suggests to us that most effective fishing is carried on in IV District or most abundant resources are found around IV District.

5. Composition of catch

We have stated in paragraph (2) the most abundant resources of Bonito in the Maldives are seemed to be those of usual sizes of which ages is 3 or 4 years old. To make it clear, the average monthly catches of big size fish (GODHAA), usual size fish (KANDU-MAS) and small size fish (RAAGONDI) for the three years of 1959, 1960 & 1961 are arranged in Table 17 and the relative Fig. 15. are provided.

With Fig. 15, we come to understand that the majority of the catch in the Maldives are composed of usual size Bonito (KANDU-MAS); that the mode of the diagram is almost W-type; that the peaks of fishing season both for GODHA & RAAGONDI are only North-East Monsoon season, the peaks for those species in July are not indicative.

6. Comparison of the Maldivian Bonito fishing status with Japanese Bonito fishing status.

Basing upon the statistics of Japanese Government Table 18 is provided, in which Japanese Bonito fishing status is tabulated and the similar figures for the Maldives are also provided in Table 19. Comparing both tables, we can find very interesting results as follows:-

- (1) The catch in weight in the Maldives is only about 14% of that of Japan.
- (2) The numbers of days sailed out for fishing in the Maldives are about twice as much as those of Japan. It is resulted from the short fishing season for Bonito in Japan, while Bonito in the Maldives can catch throughout year. From this point of view, the Maldives have more productivity – say, twice as much as at least – than Japan.
- (3) However, the catch per boat in the Maldives is only 12.8 tons against 31.4 tons in Japan. This result is principally come from

differences of fishing effectivity between the sail boat and the mechanized boat.

- (4) Also the catch per day in the Maldives is only 138kg. against 656kg. in Japan. It is only about 20% of that of Japan. Thus, it can be said that Japanese Bonito fishing is more intensive than the Maldivian Bonito fishing.

In order to study more in details, data only for the boats less than 20 tons are abstracted from Table 18 and arranged in Table 20. Because, there is no doubt that data of the fishing status with regard to the boats less than 20 tons in Japan is more appropriate to apply for the comparison with the fishing status in the Maldives. In comparison, we can understand following results:-

- (1) The number of days sailed out for fishing in Japan, are only 38% of those in the Maldives. It is resulted by the same reason mentioned above.
- (2) The catch per boat in Japan are about 6 tons a year, against 12.8 tons in the Maldives. In other words, the Maldivian boat produces Bonito more than twice as much as the Japanese boat of which tonnage less than 20 tons. This fact suggests to us that the Maldivian fishermen have excellent abilities for Bonito angling.
- (3) The catch per day in Japan 171kg. against 138kg. in the Maldives. Productivity per day in Japan is little higher than that in the Maldives. This means that Japanese Bonito fishing is conducted intensively during shorter fishing season.

In this Chapter, we have explained reasons why the various Tables and Figures are prepared. And we will criticise matters resulted from these Tables and Figures so as to find out the recommendations for the development of the Maldivian fishing industry in Chapter V.

Chapter II

SURVEY TRIPS

During our stay in the Maldives, we tried the survey trips twice, and visited 13 atolls and 23 islands, of which skeleton notes of our navigation diary as follows:-

Skelton Note from Navigation Diary during the First Survey Trip (Feb. 6th, 1962 – Feb. 15th 1962)

Feb. 6th, (Tue.)

From Malé to Gaha Faru.
Weather:- Fine, occasionally cloudy.
Sea:- Little choppy.

- 0930 Stood-by the engine.
0935 Cleared mooring lines.
0940 Passed by the entrance of Malé Harbour. Full ahead setting the course to N.
1000 Abeam Vehama-Fushi; about 0.8 miles off the island.
1200 Position: Lat. 4-26'.5 N., Long. 73-28'.2 E.
1325 Stopped the engine due to a slight problem.
1332 Started the engine again and full ahead.
1420 Abeam Kagi; about 0.8 miles E. off the island.
1430 Passed through the northern entrance of Malé Atoll, and changed the course to WW navigating along the reef line of Gaha Faru.
1600 Passed through the NW entrance of Gaha Faru reef.
1630 Arrived at Gaha Faru Island and dropped an anchor at about one mile WNW off the island.

Stayed overnight at the above.

Feb. 7th, (Wed.)

From: Gaha Faru
To: Naifaru in Faadhippolhu Atoll
Weather:- Fine
Wind:- NE, 4 – 5.
Sea:- Occasionally choppy.

- 0640 Stood-by the engine, slow ahead and lifted the anchor.

- 0642 Half ahead, inside the reef, to the northern entrance of Gaha Faru reef.
 0708 Full ahead the engine.
 0710 Abeam the northern entrance of the reef, and set the course to N/W.
 0845 Abeam Karidu, 1.5 miles west off the island.
 0935 Stopped the engine due to the oceanographic observation. (No. 1)
 0957 Full ahead the engine.
 1145 Stopped the engine due to a slight trouble.
 1150 Full ahead the engine again, and changed the course to NNW.
 Steering to Kunifuri of Miladunmadulu Atoll.
 1155 Stopped the engine again due to a trouble.
 1200 Position:- Lat. 5-16'.3 N, Long. 73-21'.8 E.
 1210 Full ahead the engine.
 1255 Abeam Kunifuri, about .3 miles west off the island.
 1325 Passed through the atoll entrance located just near the west side of Naifaru, and turn around along the reef of the island.
 1345 Arrived at Madewaru.
 1350 Dropped both anchor at about 5 chains SW off the island.

Remarks:

1. Stayed two nights at the above anchorage.
2. Landed on Naifaru for the survey.

Feb. 8th, (Thu.)
 No navigation, and assigned to a local fishing boat of Naifaru.
 (refer to attached paper A.)

Feb. 9th, (Fri.)

From:	Naifaru in Fadiffolu Atoll
To:	Ekasdu in Miladummadulu Atoll.
Weather:-	Fine
Wind:-	NE 3 – 5
Sea:-	Generally calm.

- 0635 Stood by the engine.
 0640 Lifted the anchors and left Madewaru passing through the northern entrance near Naifaru.
 0650 Set the course to N/W, and full ahead.
 0740 Stopped the engine due to oceanographic observation. (No. 2)
 0750 Finished the observation and full ahead.
 0840 Abeam Karema, the southeast island of Miladummadulu Atoll, about 0.5 miles W off the island.

- 0845 Changed the course and steered to Manadu.
 0950 Abeam Manadu, about 0.5 miles W off the island.
 0955 Changed the course to Maafaru.
 1020 Passed by the southeast point of Maafaru.
 1100 Reached to the anchorage about 0.5 miles E off Wataru, and dropped an anchor.

Remarks:- 1130 people of Maafaru came on board informing us that they had seen Mushi-Mas around Landu.

- 1200 Position:- Lat. 5°51'.5 N, Long. 73°26'.0 E.
 1205 Stood by the engine, and heaved in the anchor.
 1207 Full ahead, and left Maafaru for Landu.
 1220 Arrived at Landu and dropped anchor.

Remarks:- Landed and observed fish schools of Mushi-Mas together with Tar-wa-ra just near the shore.

- 1530 Stood by the engine and lifted the anchor. Full ahead Maungdu navigating inside along the eastward reef line of Miladummadulu Atoll.
 1740 Arrived at Maungudu.
 1745 Dropped an anchor, and finished the engine.
 1815 Heaved in the anchor due to the poor anchorage, and shifted to next island named Ekasdu.

Remark:- Stayed overnight.

Feb. 10th, (Sat.)

From:	Ekasdu
To:	Nolivaramfaru in Thiladummath Atoll
Weather:-	Fine
Wind:-	E in the morning, and shifted to NE afternoon; wind forces were 3 – 4 and 5 – 6 respectively.
Sea:-	Calm in the morning, but choppy afternoon.

- 0630 Stood by the engine, and left Ekasdu after lifting the anchors.
 0645 Full ahead steering to Raimagu. (Co. C. about N15W)
 0730 Passed abeam Raimagu, about 0.5 miles W off the island.
 1000 Passed abeam Nu, about 0.5 miles W off the island.
 1005 Changed the course to N.

- 1135 Arrived at Kuludu Furi (Named in the chart as Kuludu Furi) and moored the boat to the posts of the entrance of the passage.
 1140 Finished the engine.

Remarks:- Landed at Kuludu Furi for the survey.

- 1450 Cleared mooring lines and left Kuludu Furi for Nolivaram faru.
 1550 Arrived at Nolivaram faru and dropped an anchor just near the beach.

Remarks:-
 1. Stayed overnight.
 2. Loaded fuel and water at night.

Feb. 11th, (Sun.)

From:	Nolivaram faru
To:	Huwadu in Ihavandiffulu Atoll.
Weather:-	Slight rain in the early morning, but fine all day long.
Wind:-	E in the morning and shifted to NE afternoon; wind forces were 2 – 3 and 4 – 5 respectively.
Sea:-	Generally calm.

- 0715 Stood by the engine and lifted the anchor.
 0730 Half ahead steering to the entrance of the passage.

Remarks:- the passage across the reef near the island have been cleared out artificially for convenience of small boat since about 20 years ago.

- 0742 Full ahead the steering to Tiwaridu (Local name, but stated as Tifudu in the chart).
 0815 Abeam Tiwaridu, 6 chains off the island.

Remark:- the local names of islands near course are different from these stated in the Chart 66a, as follows:-

Name in Chart	Local calling
Tifudu	Tiwaridu
Muradu	Helimarudu
Feni	Fine

0817 Changed the course and steered to Nawadu, and dropped an anchor.

- Remarks:-
1. We observed three fishing boats catching their baits just near our boat.
 2. According to local information, the fishing condition here was generally good enough recently, and most boats caught about 400 – 600 pcs of Bonito YESTERDAY.
 3. There were the small schools of DHON-NOO-MAS attracted to our boat.

0930 Slow down the engine and conducted the oceanographic observation. (No. 3)

0955 Finished the observation and set the course to N/E.

1050 Stood by the engine and left Nawadu after lifting the anchor.

1100 Full ahead steering to N/E.

1200 Position:- Lat. 6-51'.0 N, Long. 72-54'.0 E.

1300 Reached abeam Ihavandu, about 0.6 miles W off the island.

1310 Slow down the engine.

1320 Arrived off Hoarafushi. (Stated as Umbala in the chart.)

Remark:- The name of adjacent island is also different from that of the chart as follows:-

Name in chart	-	Hauwandu
Local name	-	Hauhandu

1340 Dropped an anchor at 0.4 miles SE off Haurafuri, and waited to local people on board as pilots.

1440 Local people came on board.

1445 Stood by engine and lifted the anchor. Slow ahead in order to shift to the SW side of the island crossing the reef between Haurafuri and unnamed adjacent island.

1510 Dropped an anchor just near the beach and moored to the posts on land.

1520 Finished the engine.

Remarks:-

1. Landed on the island for the survey.
2. stayed two nights.
3. No navigation on Feb. 12th, and assigned to a local fishing boat. (Refer to B)

Feb. 13th, (Tue.)

From: Haurafuri
To: Raskatim in the North Malosmadulu Atoll.
Weather:- Fine and partly cloudy.
Wind:- E/S 2-4 in the morning and NE 5-7 afternoon.
Sea:- Rather calm in the morning, but choppy in the afternoon.

- 0705 Stood by the engine and cleared mooring lines and slow ahead crossing the between islands.
0710 Full ahead the engine.
0725 Passed through Ihavandu passage.
0730 Set the course to S/W.
0800 Abeam Maraudu, about 4 miles off the island, and changed the course to S15W.
0945 Abeam Naguri, about 1.2 miles W off the island, and changed the course navigating along the westward reef line of Tiladummathi Atoll.
1200 Position:- Lat. 6-24'.4 N, Long. 72-50'.8. Set the course to S10E.
1303 Slow down the engine and conducted the oceanographic observation. (No. 4)
1320 Full ahead steering to S10E continuously.
1640 Abeam Alifuri of Powell Islands, about one mile E off the island, and changed the course to S/W steering to Wadu, the northeast island of North Malosmadulu Atoll.
1730 Abeam the north point of Wadu and Steered to Raskatim.
1800 Arrived at Raskatim.
1805 Dropped an anchor about 7 chains W off Raskatim.

Remark:- Stayed overnight.

Feb. 14th, (Wed.)

From: Raskatim of North Malosmadulu Atoll.
To: Turadu of South Malosmadulu Atoll.
Weather:- Fine
Wind:- E 3-4 in the morning, but NE wind in the afternoon.
Sea:- Calm in the morning and choppy in the afternoon

- 0620 Stood by the engine and the anchor was lifted.
0625 Full ahead and left Raskatim steering to Fu-Ru-Furi.

0645 Passed through the water between Fu-Ru-Furi and Manafuri.
0650 Steered to Mah-Mi-Gili. (Stated as Mah-Ma-Gili in chart)
0800 Reached to 0.5 miles NE off c Mah-Mi-Gili and passed through the water between Mah-Mi-Gili and Cu-Red-Du.
0805 Changed the course to South.
0820 Changed the course to W/S steering to Kanderudu.
0830 Arrived at Kanderudu (Stated as Gunderudu in Chart 66a) and dropped an anchor about 5 chains SW off the island. Finished the engine.

Remarks:- Landed on the island for the survey.

1020 Stood by the engine and left Kanderudu after lifting the anchor.
1032 Set the course to N30E, after passing through the reef entrance located at about 1.5 miles off Kanderudu to NW.
1135 Passed by about 0.5 miles off the edge of Badu-faru reef.
1200 Position:- Lat. 5-28'.0 N, Long. 72-45'.5.
1400 Arrived at about 1.5 miles off the entrance of atoll located between Kari-faru and Nawa-faru.
1405 Changed the course and passed through the entrance steering to Wakaru.
1425 Changed the course and steered to Embudu.
1500 Changed the course and passed through the water between Embudu and Mutari.
1535 Reached to about 1.5 miles NE off Turadu and waited to come on board local people as pilot.
1610 Arrived at about 6 chains N off Turadu and dropped both anchors.
1630 Finished the engine.

Remarks:-
1. Landed on the island for the survey.
2. Stayed overnight.

Feb. 15th, (Thu.)

From: Turadu of North Maalhosmadulu Atoll.
To: Malé
Weather:- Fine and partly cloudy.
Wind:- E 3-4 in the morning; NE wind 6-8 in the afternoon.
Sea:- Generally choppy and occasionally rough.

0610 Stood by the engine, and lifted both anchors.

0615 Slow ahead and left Turadu.
0617 Full ahead steering to the reef entrance located about 1.5 miles W off Velingili.
0630 Passed through the entrance.
0632 Set the course to S/E.
0825 Passed through the entrance of Horsburgh Stoll and steered to the eastest edge of Fu-Ru-Du.
0840 Slow down the engine and conducted the oceanographic observation. (No. 5)
0850 Finished the observation and full ahead to the same course.
0910 Arrived at Fu-Ru-Du and dropped an anchor. Finished the engine.

Remarks:- 1. We could hear about fishing around this Atoll from local people.
2. This Atoll generally called by local people as Goi-Furu-Hehendu instead of Horsburgh.

1015 Stood by the engine and lifted the anchor.
1017 Full ahead and left Fu-Ru-Du steering to the atoll entrance.
1048 Passed through the entrance.
1055 Set the course to S 40 E.
1200 Position:- Lat. 4-45'.0 N, Long. 72-58'.5 E.
1630 Cross bearing position:- Lat. 4-22'.5 N, Long. 72-19'.2 E.
1632 Stopped the engine due to a slight engine trouble.
1647 Started the engine and full ahead steering along the reef line of Malé Atoll.
1825 Passed by Giravani.
1900 Reached to off the entrance of Malé Harbour and finished the engine.

Remark:- Finished the first survey trip.

Skelton Note from Navigation Diary during the Second Survey Trip
(Feb. 26th, 1962 – Mar. 11th, 1962)

Feb. 26th, (Mon.)

From: Malé
To: Mamigili, Ari Atoll.
Weather :- Fine
Wind:- NE, 1 – 2
Sea:- Quite Calm.

- 0730 Stood by the engine and cleared mooring lines.
0748 Slow ahead and left Malé.
0750 Abeam the Harbour entrance.
0800 Crossed the reef line between Malé and Wilingili. Set the course to S 75 W.
1130 Changed the course to S20W.
1200 Position:- Lat. 3-53'.5 N, Long. 73-01'.0 E. And changed the course steering along the reef line of the east side of Ari Atoll.
1407 Passed through the atoll entrance between Dugati and Digura, and steered to Mamigili and waited local people to come on board for piloting.
1515 The people came on board and guided us.
1525 Arrived off Mamigili and stopped the engine.
1530 Dropped an anchor at 6 chains E off the island.
1535 Finished the engine.

Remarks:- 1. Saw the Bonito school in the channel between South Malé Atoll and North Malé Atoll at about 0900.
2. Landed on Maamigili for the survey.
3. Stayed overnight.

Feb. 27th, (Tue.)

From: Mamigili
To: Kuda Huvadu, South Nilandu Atoll
Weather:- Fine
Wind:- Slight NE Wind, 1-2.
Sea:- Very calm.

- 0630 Stood-by the engine and lifted the anchor.
0650 Crossed the reef surrounding the island.
0655 Crossed the atoll reef line between Mamigili and Ariyaddu.

- 0657 Set the course to S 15 W.
 0710 Saw a large Ragondi school.
 0735 Slow down the engine and engaged in an Oceanographic Observation. (No. 6)
 0810 Finished the observation and full ahead.
 0858 Passed by at about 1.5 miles West of Hemit, North Nilandu.
 0935 Saw a school of Whales.
 1030 Changed the course to S 10 E.
 1200 Position:- Lat. 2°-50.0 N. Long. 72-48'.5 E.
 1310 Abeam Gadifuri and changed the course steering along the atoll line.
 1355 Passed through the entrance of the Atoll, between Kuda Huvadu and HuluWalu. (Stated in Chart).

Remark:- Local people call this island Embudu-Furi island.

- 1420 Arrived at east near the beach of Kuda Huvadu.
 1425 Finished the engine.

Remark:-
 1. Landed to the island for the survey.
 2. Stayed overnight.

Feb. 28th, (Wed.)

From:	Kuda Huvadhu
To:	Tumara-Furi, Kolumadulu Atoll.
Weather:-	Fine and scoll at evening.
Wind:-	2-4 NE.
Sea:-	Little choppy in the morning and calm in the afternoon.

- 0735 Stood-by the engine. Lifted the anchor and cleared mooring lines.
 0750 Slow ahead and left Kuda Huvadhu.
 0800 Full ahead.
 0825 Crossed the atoll reef-line and set the course to S55E steering to Buruni, Kolumadulu Atoll.
 0915 Slow down the engine and engaged in Oceanographic Observation. (No. 7)
 0950 Finished the observation and full ahead steering the same course.
 1000 Dolphins followed with our boat.
 1110 Crossed the reef line of Kolumadulu Atoll between Buruni and Koragandu.

- 1115 Dropped an anchor at 2 chains SE off Buruni and waited local people to come on board.
 1116 Finished the engine.
 1117 A local fisherman came on board and get information. Re fishing around here.
 1135 Stood-by the engine and lifted the anchor.
 1137 Full ahead and left Buruni.
 1138 Set the course to South.
 1200 Position:- Lat. $2^{\circ}29'5$ N, Long. $73^{\circ}06.5$ S.E.
 1252 Found a rather large Latti school on the bank (See Finder record.) and towed the line on the bank.

Remark:- Ratti means *Euthynus Affinis*

- 1405 Gave up fishing and steered to Thimarafushi.
 1515 Arrived 0.4 miles West of Thimarafushi
 1517 Dropped an anchor.
 1520 Finished the engine.

Remark:-
 1. Landed on the island for the survey.
 2. Stayed overnight.

March 1st, (Thu.)

From:	Tumarafuri
To:	Mamendu, Haddummati Atoll.
Weather:-	Fine
Wind:-	NE 1.
Sea:-	Very calm.

- 0743 Stood-by the engine and lifted the anchor.
 1750 Full ahead steering to Veimandu, chief island of Kolumadulu Atoll.
 1815 Arrived at off Veimandu and drifted the boat without anchoring. Waited the local people to come on board.

Remark:- Inquired fishing conditions around this island.

- 0842 Full ahead and left Veimandu.
 0848 Crossed the atoll reef line between Veimandu and Kanimidu.
 0855 Set the course to South East.
 0915 Found a large bonito school and tried to fish by towing line.

Remark:- Catch are:- 33 Bonito
 01 Yellow fish
 04 Raagondi

- 1015 Finished fishing and run to SE again.
1100 Found the position at Lat. 2°-06.0 N, Long. 73°-12.5 E.
1135 Slow down the engine and engaged in Oceanographic Observation. (No. 8)
1200 Finished the observation and full ahead, Noon-position:- Lat. 2°-01.0 N, Long. 73-10.0 E.
Changed the course steering to Mayaru. (Local people call this island as Marwasu.)
1310 Passed through the entrance between Marwasu and Guraidu. (Chart stated as Suarege.)
1320 Set the course steering to Mamendu.
1535 Arrived off Mamendu.
1545 Dropped the anchor about 3 chains to off the island.
1547 Finished the engine.

March 2nd, (Fri.)

From: Mamedu.
To: Wiringili, Huvadu Atoll.
Weather:- Fine
Wind:- NE 1-2.
Sea:- Calm.

- 0500 Stood-by the engine.
0515 Lifted the anchor and slow ahead.
0535 Half ahead and left Mamendu.
0545 Crossed the atoll reef line between Hitadu and Gadu.
0546 Set the course to South.
0900 Slow down and engaged in an Oceanographic Observation. (No. 9)
0930 Finished the observation and full ahead.
1200 Position:- Lat. 0°-58.0 N, Long. 73°-25.5 E.
1230 Abeam 2.5 miles East off Mamendu.
1320 Crossed the atoll reef line between Kudu and Mandu, Suvadu Atoll.
1345 Dropped anchor about 0.5 mile West of Wiringili.
1347 Finished the engine.

Remark:- 1. Landed on the island for the survey.
 2. Stayed overnight.

March 3rd, (Sat.)

From: Wiringili
To: Gadu through Dandu
Weather:- Fine
Wind:- NE 3-4
Sea:- Choppy

- 0620 Stood-by the engine and heaved in the anchor.
0627 Slow ahead left Wiringili after lifting the anchor.
0628 Full ahead inside the atoll steering to Dandu along the reef line.
0740 Arrived off Dandu and stopped the engine drifting the boat. Waited the arrival of local people on board.

Remark:- Got fishing informations from local people.

- 0810 Full ahead and left Dandu steering to South.
0900 Abeam about 1.5 miles East off Haulus and changed the course steering to Gadu.
1040 Arrived off Gadu.
1045 Dropped on anchor at about 8 chains NW off the jetty of the island.
1047 Finished the engine.

Remarks:-
1. Landed on the islands for the survey.
2. Stayed overnight.

March 4th, (Sun.)

From: Gadu
To: Mafuri, Suvadu Atoll
Weather:- Cloudy in the morning, but fine in the afternoon.
Wind:- NE 2-4
Sea:- Calm

- 0740 Stood-by the engine and lifted the anchor.
0745 Full ahead and left Gadu crossing the atoll lagoon
0810 Set the course to N20W.
1000 Changed the course to N10W.
1107 Abeam about 5 chains E off Magili (isolated islet).
1200 Position:- Lat. 0°-44'0 N, Long. 73°-16'.5 E.
1330 Arrived off Mafuri.
1335 Dropped both anchors at about 0.5 miles NW of the islands.

1350 Finished the engine.

Remark:-
1. Landed on the island for the survey.
2. Stayed overnight.

March 5th, (Mon.)

From: Mafuri
To: Hitadu, Hadunmathi Atoll.
Weather:- Cloudy in the morning but fine in the afternoon.
Wind:- NE 2-4.
Sea:- Generally calm, but sometimes choppy.

0610 Stood-by the engine and lifted the anchors.
0615 Slow ahead and left Mafuri.
0618 Full ahead steering to NW.
0625 Abeam about W of Kandugili.
0629 Set the course to N25E.
1000 Slow down the engine and engaged in Oceanographic Observation.
(No. 10)
1028 Finished the observation and full ahead steering to the same course.
1050 Arrived above the school between two atolls located almost at the
middle of the canal.
1055 Found a fish school on the shoal and tried fishing by towing lines.

Caught:-
1 big yellow fin
1 big eye. (Bowa Kauncli)
4 small yellow fins
1 big eye (small)

1200 Position:- Lat. 1°-37'.0 N, 73°-18'.0 E.
1215 Finished fishing.
1510 Found an island of Haddumati Atoll.
1715 Crossed the reef line of Haddumati Atoll between Hitadu and
Gadu.
1725 Arrived off Hitadu.
1750 Dropped the anchor 1 chain off the beach of the island.

Remark:- Stayed overnight.

March 6th, (Tue.)

From: Hitadu, Haddummati Atoll.

Through: Timarafuri, Kolumadulu Atoll.
To: Vilifushi.
Weather:- Fine.
Wind:- NE 2-3
Sea:- Calm.

- 0537 Stood by the engine.
0545 Lifted the anchor and cleared mooring lines.
0555 Slow ahead and left Hitadu steering to Munafuri (NW side passage of the Atoll)
0745 Crossed the atoll reef line between Manafuri and Wabuni (locally called Maniyafushi and Warinolu respectively)
0955 Crossed the reef line of Kolumadulu Atoll between Timarafuri and Funadu. Saw Bonito shoal near atoll line.
1005 Arrived off Timarafuri and dropped in anchor.
1015 Finished the engine.
1205 Stood by the engine.
1210 Lifted the anchor and full ahead steering inside the atoll, to Wilifuri along the reef line.
1515 Arrived off Wilifuri.
1517 Dropped the anchor about 5 chains SW the island.
1530 Lifted the anchor and shifted to about 7 chains W of the island.
1535 Dropped both anchors.
1605 Finished the engine.

Remark:- 1. Stayed two nights.

March 8th, (Thu.)

From: Vilifushi, Kolumadulu Atoll
To: Kuda Huavadu, South Nilandhu Atoll.
Weather: Fine.
Wind:- NE 1
Sea:- Calm.

- 0945 Stood by the engine.
0945 Lifted the anchor and slow ahead.
0955 Full ahead and left Wilifuri steering to Buruni.
1130 Arrived off Buruni and stopped the engine to drop two passengers to the island.
1137 Full ahead and left Buruni.
1143 Crossed the passage East of Buruni and set the course to N35E

- steering to Kuda Huvadu.
 1200 Position:- Lat. 2°-35'.0 N, Long. 73-05.2 E.
 1314 Crossed the reef line of south Nilandu Atoll at the east of Kuda Huvadu.
 1335 Arrived at Kuda Huvadu.
 1338 Dropped an anchor just near the island.
 1339 Finished the engine.

March 9th, (Fri.)

From:	Kuda Huvadu
To:	Dihgaru, Mulaku Atoll through Rimbudu.
Weather:-	Fine
Wind:-	NE 1-2
Sea:-	Calm

- 0655 Stood by the engine and lifted the anchor.
 0700 Slow ahead and left Kuda Huvadu.
 0725 Full ahead steering to Rimbudu. (Jewellies island)
 0925 Arrived at Rimbudu and stopped the engine drifting the boat.

Remark:- 1. On the way to Rimbudu, caught Ratti and Raagondi by towing lines.
 2. Landed to see Goldsmiths.
 3. Atoll chief, Mr. Ahmed Shathir came here to guide us.

- 1015 Full ahead and left Rimbudu steering to Midu. (Unnamed on the chart)
 1112 Passed through the atoll passage between Midu and Furi located NE corner of the atoll.
 1200 Position:- Lat. 3°-01.5 N, Long. 73°-06.0 E.
 1405 Crossed the reef line of Mulaku Atoll at the north of a small islet which located at eastward of the Atoll (Chart stated as Rocky Islet) and steering to Dihgaru.

Remark:- 1. Could not see any fish school in the channel.
 2. Could see a group of dolphins.
 3. Caught four Mania-Mas by towing lines.

- 1535 Arrived off Dihgaru and slow down the engine.
 1538 Dropped both anchors and stopped the engine.
 1553 Finished the engine.

Remark:- Landed on the island for the survey and stayed overnight.

March 10th, (Sat.)

From: Dihgaru, Mulaku Atoll
To: Felidu, Felidi Atoll
Weather:- Fine
Wind:- WNW 1-2
Sea:- Calm

- 0615 Stood by the engine.
0625 Slow ahead and left Dihgaru steering to the passage between Dihgaru and Maduwaru.
0640 Full ahead.
0645 Crossed the passage and set the course to N20W.
0735 Slow down due to Oceanographic Observation. (No. 11)

Remark:- Current flow to N80E.

- 0747 Finished the observation and full ahead engine.
0756 Slow down due to a slight engine trouble.
0805 Full ahead.
0835 Passed by Rakidu and stopped the engine, because the local people approached to our boat.

Remark:- 1. According to an information from local people that they are suffering from lack of bait and using Ta-Wa-Ra.
2. Could not see any fish school in the channel.

- 0845 Full ahead steering to Kaedu.
1005 Arrived off Felidu and slow down the engine.
1020 Dropped both anchors.
1030 Finished the engine.

Remark:- 1. Landed for the survey.
2. Stayed overnight.

March 11th, (Sun.)

From: Felidu, Felidi Atoll.
To: Malé
Weather:- Fine

Wind:- N 2-4
Sea:- Calm

- 0710 Stood by the engine.
0717 Lifted the anchor and slow ahead.
0722 Crossed the reef line of the atoll passing by Felidu.
0950 Slow down the engine and engaged in the Oceanographic Observation. (No. 12)
1005 Finished the observation and full ahead.
1200 Position:- Lat 3°-57.5 N, Long. 73°-40' 0 E.
1402 Arrived off the entrance of Malé Harbour.

- Remark:-
1. Could not see any fish school.
2. Caught a few Ratti and Raagondi by towing lines.

The traces of above two trips are shown in Figs. 16 and 17. Through these trips, we observed actually the local pole and line Bonito fishing and tried ourselves oceanographic observations several times. Data both of oceanographic surveys, and classification of plankton obtained are shown in Tables 21 & 22 respectively and some of records indicated by a fish finder (Furuno made, 601 type) are shown in Figs. 18, 19, 20 & 21.

Thus we come to understand following facts:-

- (1) The important fishing method used throughout the Maldives is only a pole and line Bonito fishing. There are, of course, such other fishings as the trolling line fishing, the small beach seine fishing, harpooning etc., but these are not weighty economically for the Maldivian fishing industry.
- (2) The all Bonito pole and line fishings in the Maldives are operated by sailboat. However, such other points as using live baits, scouting throwing baits, splashing, etc., are operated by quite similar ways or ideas in Japanese Bonito fishing.
- (3) Most Maldivian fishing boats are manned by about 10 or 11 fishermen, but 4 fishermen out of 10 men are usually engaged in angling when they encounter Bonito school, due to the proper structure of the Maldivian boat.

- (4) Fishermen's abilities to fish Bonito are by no means inferior to those in Japan.
- (5) The shape and structure of The Maldivian fishing hook is rather peculiar and ill-shaped. Japanese style hooks are likely to be more effective for the fishing.
- (6) Baits used for the fishing are caught usually in the early morning of the same day, and they go out fishing after loading enough baits. Accordingly, their arrivals at the fishing grounds are usually too late to fish Bonito before sunrise, whose appetite are generally most vigorous through the whole day.
- (7) Any oceanographic datum in the past is not available in the Maldives, accordingly we cannot explain the relation between oceanographic condition and the catch of fish. We have prepared Tables 21 & 22 to show the results of our observations. These data should be accumulated for several years in order to use them for predicting the catch of the year.
- (8) As shown in Fig. 18 the schools of fish are abundant also even in fishing ground off the Maldives. However, these schools are not exploited yet at present. As shown in Fig. 17, it seems us that bottom species are also abundant in the lagoons, these species are not also utilized yet in the Maldives. As shown in Fig. 20, Ratte are always seen in the Maldives. As shown in Fig. 16, there are some species which are attracted by light, accordingly there is possibility to apply fishing by means of attracting lamps.
- (9) The way of catching bait in the Maldives is rather poor.
- (10) The technology to process fresh Bonito into so-called "THE MALDIVE FISH" are excellent and economic. And there are enough potential facilities and labourers to make more the Maldivine Fish even as much as several times of the present production.
- (11) The carpentry works for the constructions of boats in The Maldives are excellent.
- (12) There is no facility to preserve fresh fish in the Maldives.

(13) There is no harbour facility to load or unload fish at most islands in the Maldives.

(14) Dried fish with salting are scarcely made in the Maldives.

Chapter III

ECONOMICAL STUDY ON COST OF FISH PRODUCED IN THE MALDIVES

The so-called "Maldivian Fish" (dried fish) imported by Ceylon from the Maldives are provided in Table 23, of which data are abstracted from "CEYLON CUSTOMS RETURNS" published by the Ceylon Government. With Table 23, we can study the following matters:-

- (1) Induction for weight of fresh fish from weight of the dried fish.
 - a. The dried fish exported from the Maldives are totalled 58,579 cwt. (2,975,813kgs.) in 1958, 67,146 cwt. (3,411,016kgs.) in 1959, 58,166 cwt. (2,954,833kgs.) in 1960 and 65,879 cwt. (3,346,653kgs.) in 1961 respectively. The average for above four years is 3,172 tons.
 - b. On the other hand, during our stay in the Maldives, we experimented the loss of weight to make the dried Bonito from fresh fish as follows:-

Experiment data to make dried bonito

(1) Sampling:-

Date: March 10th, 1962
Place: Fulidu, Felidu Atoll
Number of fresh fish: 20 pieces
Weight of 20 pcs.: - 38.0kgs.

(2) Weight after dressing:	22.8kgs.
(3) Weight after boiling (20 min.)	19.7kgs.
(4) Weight after smoking (3 hours)	11.5kgs.
(5) Weight during drying under sun.	
a) At 6.30 pm on Mar. 11	10.4kgs.
b) At 6.30 pm on Mar. 12	9.2kgs.
c) At 6.30 pm on Mar. 13	8.7kgs.
d) At 6.30 pm on Mar. 14	8.2kgs.
e) At 6.30 pm on Mar. 15	8.0kgs.
(6) Loss of weight:-	79%
(7) Weight remained:	21%

- c. Using the datum (weight remained), 21%, we provide Table 24 of which figures are induced weight of fresh fish from weight of dried fish.

TABLE 24

YEAR	WEIGHT OF DRIED FISH PRODUCED	WEIGHT OF FRESH FISH INDUCED
1958	2,976 tons.	14,172 tons.
1959	3,411 tons.	16,243 tons.
1960	2,955 tons.	14,072 tons.
1961	3,347 tons.	15,938 tons.
Average	3,172 tons.	15,106 tons.

Sep	3,208	565,505	176.28
Oct	8,058	1,429,958	177.45
Nov	3,874	740,415	191.12
Dec.	3,306	613,387	185.54
Total	65,879	12,170,260	184.74

d. Let us compare weight of fresh fish induced in Table 24 with weight of fresh fish in Tables 6-A, 6-B & 6-C, which are

converted from pieces of fish produced in the Maldives as follows:-

TABLE 25

YEAR	WEIGHT CONVERTED (or produced)	WEIGHT INDUCED (or exported)	BALANCE
1959	17,260.4 tons.	16,243 tons.	1,017.4 tons.
1960	17,588.5 tons.	14,072 tons.	3,516.5 tons.
1961	22,486.6 tons.	15,106 tons.	7,380.1 tons.
Average	19,112.0 tons.	15,141 tons.	3,971.0 tons.

Of course, there is a time lag (3 – 4 months) between the production of fresh fish and the exportation of the dried fish. Accordingly, weight of fresh fish produced for each year does not consist with weight of the dried fish exported. Besides, there are always some quantity used for domestic consumptions. Taking these factors into consideration, it can be said reasonably that our estimation regarding weight of fresh fish produced in the Maldives is justifiable. Consequently, we can apply these figures for our further studies without misgivings.

(2) Cost of fish.

- a. With Table 23, we can see the prices of the dried fish exported from Maldives to Ceylon as follows:-

Average price in 1958	Rs. 190.2 per cwt.
1959	Rs. 180.9 per cwt.
1960	Rs. 181.6 per cwt.
1961	Rs. 184.7 per cwt.
Average for above four years	Rs. 184.3 per cwt.

Using Rs. 184.3 as the price of the dried fish in Ceylon, let us induce the cost of fresh fish in the Maldives from that of the dried fish as follows:-

- (1) Price of dried fish per cwt. Rs. 184.3
- (2) Freight from Malé to Colombo per cwt..... less Rs. 6.0
- (3) Export duty levied (Rs. 20 per cwt.) less Rs. 20.0
- (4) Misc. expenses in the Maldives estimated less Rs. 10.0

- (5) Balance..... 148.3
 - (6) As we have studied above, it is needed 476lbs. Of fresh fish to produce 100lbs. of the dried fish. Accordingly, 476lbs. of fresh fish are valued at Rs. 148.3
 - (7) In other words, consequently, the cost of fresh fish in the Maldives is Rs. 31.15 per cwt. or Rs. 0.61 per kgs.
- b. The prices of Bonito and yellow fin tuna in Japanese domestic market as follows:-

YEAR	AVERAGE PRICE PER KGS. BONITO (Rs.)	AVERAGE PRICE PER KGS. YELLOW-FIN (Rs.)
1956	0.89	1.11
1957	0.82	1.12
1958	0.75	1.23
1959	0.68	1.31
1960	1.20	1.50
Average	0.87	1.25

Remarks:-

- (1) Average price of Bonito in 1960 was especially high due to heavy depression of catch in the year.
- (2) The above prices are average values of each year, and fish used for such processing purposes as cans or dried fish are distributed usually at the prices of Rs. 0.65-0.70.

(3) Conclusion

- According to Paragraphs (1) & (2), we can conclude following matters
- a. The Maldivian fish industry produces annually 19,112 tons in average.
 - b. Cost of fresh fish in the Maldives is Rs. 0.61 per kgs. in average, which is cheaper than that of in Japan.
 - c. The Maldivian fishing industry produces annually Rs. 10,758,320 (Rs. 0.61 x 19,112,000 kgs.) in value.

Chapter IV

STUDY ON POSSIBILITY OF CANNING FACTORY IN THE MALDIVES

(1) Cost accounting of Canned Goods.

The cost accounting of a canned product is one of most important factors to study whether the canning factory may be successfully managed or not. We could obtained the cost accounting of light meat tuna can from one of Japanese well-known cannery as follows:-

TABLE 27 COST ACCOUNTING OF T 2/4 OILED LIGHT MEAT CAN PER CASE

ITEM	QUAN.	UNIT	AMOUNT
a. Material (Bonito)	23.3kgs.	0.705	Rs. 16.42
b. Empty can	48 pcs.	0.152	7.29
c. Cotton seed oil	1.8kgs.	2.250	4.05
d. Salt			0.01
e. Operating expenses of canning factory & misc. deprecations such as factory building, canning machine, boiler etc.,			2.65
f. Labour			1.19
g. Storage			0.13
h. Inspection fee			0.05
i. Inland transportation			0.53
Sub Total			32.32
Reveat due to by-product,	Less		2.71
Total Cost			Rs. 29.61

Remark:- The latest F.O.B. YOKOHAMA quotation of this can goods is Rs. 31.09 per case, accordingly its gross profit is Rs. 1.48 per case.

(2) Comparisons of costs for various items in Table 27.

- a. In Table 27, we have learned that the price for Bonito, as raw materials, is Rs. 0.71 per kgs. (see Table 27. a.) And we have learned also, in Chapter III. (2), (a), that the average cost of Bonito in the Maldives is 0.61 per kgs. Accordingly, the Maldives can compete in cost of raw material with advantage.

- b. On the other hand, however, the Maldives have not any advantage for other items such as b, c, d, e in Table 27.
- c. As to f, g, h, I in Table 27, it seems to us that the Maldives have advantages more or less comparing with those in Japan. But, it cannot be said definitely at this moment, because there is not any datum concerned in the Maldives.

(3) Discussion

- a. The above is discussed with respect to the canned goods of Bonito, but regarding even such other species as tuna, Muri-fish, etc., we believe that same circumstances might be found.
- b. To operate a canning factory successfully, a cold storage for raw material is essential to establish together with the plant. Because, the plant cannot be managed and maintained well without the constant supply of raw material throughout year. In other words, prior to establishing the canning plant, the Maldives must have a cold storage with refrigerating machine.
- c. Generally speaking, the canning industry in any country can be existed successfully, only when the production of fish is so largely developed that all fish produced cannot be marketable favourably in any such form as fresh, salted, salted and dried, or frozen, products, etc., except for canned goods. In other words, when fresh fish or simply processed product have their favourable market to be disposed without any difficulty, the canning industry, in general, does not come into existence.
- d. According to "Ceylon Customs Returns" published by the Ceylon Government, salted and dried fish (excluding "Maldives fish") are imported in Ceylon from foreign countries as much as Rs. 59,307,864 in 1960 and Rs. 47,063,929 in 1959, of which amounts are roughly 5 times of "Maldives fish" imported; and their unit prices are Rs. 12.2 and Rs. 12.5 respectively. Though we could not have a chance to conduct the marketing research of these products in Colombo during our last visit, we believe the similar products will be easily produced also by the simple processing in the Maldives.
- e. In conclusion, as we have studied above, there seems to be a possibility to establish a canning factory in the Maldives. We think that there are many matters, prior to establishing the canning factory, to be done for the development of the fishing

industry in the Maldives; accordingly we need not to be in haste for installing this facility at present.

Chapter V

SUMMARY, CONCLUSION AND RECOMMENDATION

(1) Fishing season:-

We have understood with various tables and diagrams that there are two seasonal peaks of catches in the Maldives – once in Northwest Monsoon season and once in Southwest Monsoon season. As far as Bonito fishing, all fishing efforts must be concentrate in these peak seasons.

(2) Fishing productivity by districts

We have learned that productivities in Northern districts in the Maldives much higher than those of Southern districts, and productivities by atolls fluctuate nearly in proportion to the populations of atolls. We, however, are not sure yet the cause of this phenomenon. Accordingly, we must know, by our further studies, whether the Northern districts are more populated because of more abundance of Bonito resources or more populations in the Northern districts can produce more fish without relating the resources themselves. When we will be able to find the connect distributions of fish resources in future, we will be able to establish the administrative plan to even the productivities throughout the Maldives so as to promote the production of the country.

(3) We have totaled the annual catches in the Maldives into two ways – the catches by pieces and the catches by weight as follows:-

Annual catches in the Maldives

YEAR	CATCH BY PIECES	CATCH BY WEIGHT
1959	8,407,789	17260.4
1960	8,438,725	17588.5
1961	11,011,046	22486.6

(4) The fish population and the fishing boat

Dividing the Maldives into 6 districts, we have studied the geographical migration of Bonito and found that there is not distinct trace of the geographical migration in the Maldivian fishing industry. That is to say, the objective stock of the present Maldivian fishing industry are not the

migrating population, but the native population dwelled around the Maldives. This theory have been proved also by the investigation of the stomach contents of Bonito caught during our stay in the Maldives. There must be other migrating population in the high sea off the Maldives. In fact, we could observe such the migrating school in the just middle of the One and Half Degree Channel between L Atoll and G Atoll during our survey trip. These populations use to be large and have vigorous appetite for baits. It seems to us that fishing boat used in the Maldives. At present is not appropriate enough to exploit those schools, and 20 tons to 50 tons mechanised fishing boats are recommended for the purpose.

(5) Composition of catch

We have learned that the majority consisted of catches are 3 or 4 years old fish, and accordingly there is no evidence of over-fishing at present in the Maldives. Consequently, there is nothing to fear about the decline of the Bonito resources for an age.

- (6) In the Maldives, the local fishing boat catches usually their baits in early morning before going out for fishing. This custom must be improved as soon as possible so as to increase their catches. To solve the problem, we would like to recommend to facilitate a live bait basin at least in each fishing island.
- (7) As we have learned in Chapter III, the cost of yellow fin tuna in Japanese domestic market is Rs. 1.25 in average which is more expensive than that of Bonito. However, F.O.B. price of frozen tuna for exporting is much cheaper than average cost mentioned above, it is only about Rs. 0.94 per kgs. in 1961. Reducting Rs. 0.10 as refrigerating expense, etc., Rs. 0.84 is much higher than Rs. 0.61 in the Maldives which we have studied also in Chapter III. As a result, if yellow fin tuna will be able to dispose in frozen form instead of the dried fish, more money will be earned from same quantity. In this point of view, we wish to recommend the exportation of frozen yellow fin tuna to U.S.A or European Markets.
- (8) There are abundant useful species within the atolls. Those fish are important not only to utilize for materials of producing dried and salted fish but also for good baits of tuna longlining. To catch these species, we would like to recommend a OTOSHIAMI (a Japanese stationary trap net) to be attempted. During our survey trips, we racked our brains

over this matter and, at last, concluded that the trap net will be most effective for those purposes.

- (9) In Chapter IV, we have studied also that there is a large market of salted and dried fish in Ceylon. We wonder why the Maldives have not been able to produce such products from unutilized species which are abundant in the Maldives. Judging from our experiences, we think that the salted and dried fish must have been failed to produce due to harm by laying eggs of flies which flock suddenly on drying fish without cooking. We would like to recommend a simple screens to protect drying fish from the harm of flies.
- (10) During our last visit, we could not have a chance to survey the resources of mother of pearls in Maldives. However, according to BRITANNICA ENCYCLOPEDIA, there are abundant resources of these shells, we would like to recommend to purchase some diving suits for the purpose of this exploiting. By the way, a diving suit at least is essential for even emergency use in the Maldives.
- (11) In Chapter IV, we have studied that there is provably a possibility to establish the canning factory in the Maldives, but we cannot guarantee yet definitely the successful management of the canning factory without detailed data regarding cost accounting of the product. However, we would like to recommend a pilot of which scale is minimum to know necessary data mentioned above.

Table I-A Catches by Islands (pieces) for 1961

The Left diagram recorded at night , and the right diagram recorded in the morning. We can see the different attracting conditions between night and day time.

Place: At the anchorage off Thimarfuri, Kolumadulu Atoll.
Dates:- Left---2400, Mar. 3rd, 1962
Right--0700, Mar.4th, 1962

The names of Atolls and Islands as used by Mr. Yoshitsugu Shiji and their modern equivalents

(H.A) Thiladunmmathi North	Haa Alif Atoll Thiladunmathi Uthuruburi
Thurakunu	Thurakunu
Uligamu	Uligamu
Berimmadu	Berinmadhoo
Hathifushi	Hathifushi
Muladu	Mulhadhoo
Haduvaafuri/ Haufafuri ?/	Hoarafushi
Huvrafushi	
Ihavandu	Ihavandhoo
Kelaa	Kelaa
Vashafaru	Vashafaru
Dihdu	Dhidhoo
Marandu/ Maraudu ?	Maarandhoo
Thakandu	Thakandhoo
Utheem	Utheemu
Muraadu	Muraidhoo
Baarah	Baarah
	Filladhoo
Hauwadu	Huvahandhoo ?

(H.D) Thiladunmmathi South	Haa Dhaalu Atoll Thiladunmathi Dhekunuburi
Vaikaradu	Vaikaradhoo
Kumundu	Kumundhoo
Maivaidu	Maavaidhoo
Neikurendu	Neykurendhoo
Kuludhuffushi /	Kulhudhuffushi
Kuludufuri	
Kuribi	Kuribi
Nehlaidu	Nellaidhoo
Nolhivarafaru /	Nolhivarafaru
Nolhivarafaru /	
Nolhivaram faro	
Naivadu / Nawadu ?	Naivaadhoo
Finei	Finey
Hodaidu	Hondaidhoo
Faridu	Faridhoo
Hanimadu	Hanimaadhoo
Halimaradu	Hirimaradhoo ?
Homondu	Kuburudhoo ?
	Nolhivaramu
	Makunudhoo
Tifudu/ Tiwaridu	Theefaridhoo ?
Naguri	Naagoashi ?

(SHA) Miladummadulu North	Shaviyani Atoll Miladunmadulu Uthuruburi
Goidu	Goidhoo
Numara	Noomaraa
Laimagu / Raimagu	Lhaimagu
Bilehfahi	Bilehfahhi
Komandu	Komandoo
Feidu	Feydhoo
Firubaidu	Firubaidhoo
Maugudu /	Maaugoodhoo
Maungudu	
Fokaidu	Foakaidhoo
Maroshi	Maroshi
Fevah	Feevah
Kadithim	Kaditheemu
Makadudu	Maakandoodhoo
	Funadhoo
	Narudhoo
Ekasdu	Ekasdhoo
Nu	Neyo ?

(N) Miladummadulu South	Noonu Atoll Miladhunmadulu Dhekunuburi
Manadu	Manadhoo
Lohi	Lhohi
Bomasdu	Bomasdhoo
Hebadu	Hebadhoo
Kudafari	Kudafari
Kedikolu	Kedhikolhudhoo
Tolendu	Thollhendhoo
Malendu	Maalhendhoo
Landu	Landhoo
Mafaru / Ma-faro	Maafaru
Holudu	Holhudhoo
Fohdu	Fodhdhoo
Velidu	Velidhoo
	Miladhoo
	Magoodhoo
Kunifuri	Kudafari ?
Karema	Karimma ?
Wataru	Vattaru ?

(R.) Malosmadulu North	Raa Atoll Maalhosmadulu Uthuruburi
Ugufaru	Ugoofaaru
Agolithim	Agolhitheemu
Rasgethim / Rasketim	Rasgetheemu
Vadu / Wadu	Vaadhoo
Alifushi / Alifuri	Alifushi
Kadoludu/ Kanderudu ?	Kadolhudhoo
Maduhvari	Maduvvari
Midu	Meedho
Kinolas	Kinolhas
Fainu	Fainu
Iguraidu	Iguraidhoo
Innamadu	Innاماadhoo
Rasmadu	Rasmaadhoo
Marguradu	Maakurathu ?
Ugulu	Ugulu
Ufulandu	Ufulandhoo
	Hulhudhuffaaru
Wakaru	Wakkaru ?
Furufuri	Faarafushi ?
Manafuri	Maanenfushi ?
Mah-Ma-Gili	Maamigili
Badu-faro	Bodufaru
Velengili	Vilingili
Giravani	Giraavaru

(B) Malosmadulu South	Baa Atoll Maalhosmadulu Dhekunuburi
Malhos	Maalhos
Goidu	Goidhoo
Feħendu	Feħendhoo
Fuladu	Fulhadhoo
Hithadu	Hithaadhoo
Thulħadu / Turadu	Thulhaadħoo
Kendu	Kendħoo
Kudarikil	Kudarikilu
Kihadu	Kiħaadħoo
Donfanu	Dhonfanu
Daravandu	Dharavandħoo
Eidafushi	Eydhafushi
Komandu	Kamadħoo ?
Mahdu	
Funadu	Funadħoo
Ududu	Undħoodħoo
Kari-faro	Kanifushi ?
Embudu	Eboodħoo ?
Mutari	Muthaafushi ?
Goi-Furu-Heħendu / Fu-Ru-Du	Goi-Fulha-Feħendħoo ?

(LAV) Fadiffolu	Lhaviyani Atoll Faadhippolhu
Naifaru / Nawa-faro?	Naifaru
Hinnavaru	Hinnavaru
Kurendu	Kurendhoo
Olhuvelifushi	Olhuvelifushi
	Maafilaafushi
Madewaru	Madivaru ?
Cu-Red-Du	Kuredhdho ?

(K) Malé Atoll	Kaafu Atoll Malé Atoll
Kashidu	Kaashidhoo
Gafaru / Gaha-faro ?	Gaafaru
Difushi	Dhiffushi
Tulusdu	Thulusdhoo
Huraa	Huraa
Himmafushi	Himmafushi
Guli	Gulhi
Mafushi	Maaafushi
Guraidu	Guraidhoo
Vehama furi	Vihamanaafushi ?
Kagi	Kagi
Karidu	Kaashidhoo
Wilingili	Villingili

(A) Ari Atoll	Alifu Alifu/Alifu Dhaalu Atoll Ari Atholhu Uthuruburi/ Ari Atholhu Dhekunuburi
Himandu	Himandhoo (A.A)
Feridu	Feridhoo (A.A)
Bodufoludu	Bodufolhudhoo (A.A)
Mathiveri	Mathiveri (A.A)
Ukulas	Ukulhas (A.A)
Kuramathi	Kuramathi
Rasdu	Rasdho (A.A)
Thohdu	Thoddoo (A.A)
	Maalhos (A.A)
Mamigili / Mamigini	Maamigili (A.Dh)
Diddu	Dhidhdhoo (A.Dh)
Fenfushi	Fenfushi (A.Dh)
Digurah / Digura ?	Dhigurah (A.Dh)
Dagethi / Dugati ?	Dhagethi (A.Dh)
Mandu	Mandhoo (A.Dh)
Mahibadu	Mahibadhoo (A.Dh)
Kuburudu	Kuburudhoo (A.Dh)
Omadu	Omadhoo (A.Dh)
Hanyaameedu	Hagnnameedhoo (A.Dh)
Ariyaddu	Ariyadho ? (A.Dh)

(V) Felidi Atoll	Vaavu Atoll Felidhe Atoll
Thinadu	Thinadhoo
Keyodu	Keyodhoo
Felidu	Felidhoo
Fulidu	Fulidhoo
Rakidu	Rakeedhoo

(M) Mulaku Atoll	Meemu Atoll Mulaku Atholhu
Maduhvari	Maduvvari
Dihgaru	Dhiggaru
Kolufushi	Kolhufushi
Vareyafushi	Kolhuvaariyaafushi
Nalafushi	Naalaafushi
Muli	Muli
Mulah	Mulah
Veivah	Veyvah
Madifushi	Madifushi
Raimandu	Raimandhoo

(F) Nilandu Atoll North	Faafu Atoll North Nilandhe Atoll
Fiali	Feeali
Magudu	Magoodhoo
Nilandu	Nilandhoo
Darabodu	Dharaboodhoo
Bileidu	Biledhdhoo
Himithi / Hemit	Himithi

(D) Nilandu Atoll South	Dhaalu Atoll South Nilandhe Atoll
Kudahuvadu	Kudahuvadhu
Maebudu	Maaeboodhoo
Vani	Vaanee
Gemendu	Gemendhoo
Badidu	Badidhoo
Meedu	Meedhoo
Huludeli	Hulhudheli
Rimbudu ?	Ribudhoo
Huluwalu	Olhuveli ?

(THA) Kolumadulu	Thaa Atoll Kolhumadulu
Buruni	Buruni
Vilifushi / Wilifuri ?	Vilufushi
Madifushi	Madifushi
Diyamigili	Dhiyamigili
Guradu / Guradu	Guraidhoo
Gadifushi / Gadifuri ?	Gaadhiffushi
Thimarafushi /	Thimarafushi
Tumara-furi	
Veimandu	Veymandoo
Kibidu	Kibidhoo
Omadu	Omadhoo
Hirilandu	Hirilandhoo
Vandu	Vandhoo
Kadudu	Kadoodhoo
Koragandu	Kuda kandu ?
Kanimidu	Kanimeedhoo ?

(L) Hahdunmathi	Laamu Atoll Hadhdhunmathi
Kunahandu	Kunahandhoo
Hitadu	Hithadhoo
Mamendu / Mamedu	Maamendhoo
Gadu	Gaadhoo
Funadu	Fonadhoo
Gamu	Gamu
Kalaaidu	Kalhaidhoo
Mundu	Mundhoo
Mabaidu	Maabaidhoo
Dabidu	Dhabidhoo
Isdu-Kalaaidu	
Mararu / Mayaru? /	Maavah ?
Marwasu	
	Isdhoo
Wabuni / Warinolu	Vadinolhu ?
Munafari / Maniyafushi	Munnafushi ?

(G) Huwadu Atoll	Gaafu Alifu Atoll/Gaafu Dhaalu Atoll Huvadhu Atholhu Uthuruburi/ Huvadhu Atholhu Dhekunuburi
Devvadu	Dhevavadhoo (G.A)
Kolamaafusi	Kolamaafushi (G.A)
Vilgili	Vilgili (G.A)
Maamendu / Mandu?	Maamendhoo (G.A)
Nilandu	Nilandhoo (G.A)
Daandu	Dhaandhoo (G.A)
Kodey	Kodey (G.A)
Driyadu	Dhiyadhoo (G.A)
Gemanafusi	Gemanafushi (G.A)
Kaduhuludu	Kanduhulhudhoo (G.A)
Mathoda	Maathodaa (G.Dh)
Fiyoari	Fiyoari (G.Dh)
Ratafandu	Rathafandhoo (G.Dh)
Nadalla	Nadallaa (G.Dh)
Hoadeddu	Hoadedhdhoo (G.Dh)
Madaveli	Madeveli (G.Dh)
Hawaruthinadu	Thimadhoo (G.Dh)
Gaddu	Gadhadoo (G.Dh)
Fares	Fares (G.Dh)
	Vaadhoo (G.Dh)
Kudu	Kooddoo ? (G.A)
